C3 AND C2 FILTERS

C3 filters are built in inverters (3PH; 400V; $\geq 4\text{kW}$) and (3PH; 230V; $\leq 1.5\text{kW}$) by using J10 to determine the connection or disconnection. External C3 filters can be configured for inverters (1 PH; 230V; $\leq 2.2\text{kW}$), (3PH; 400V; $\leq 2.2\text{kW}$) and (3PH; 230V; $\leq 0.75\text{kW}$).

External C2 filters are optional for all ZS20 series inverters.

EXTERNAL KEYPAD

The membrane keypad are standard for inverters (3PH; 400V; $\leq 2.2\text{kW}$), which also support external LED keypads. The keypads for inverters (3PH; 400V; $\geq 4\text{kW}$) can be used as external keypads.

ZS20 series inverters can be configured with LED keypad which has the data copy function to upload or download the parameters.

PLUGGABLE DESIGN FOR COOLING FANS, EASY MAINTENANCE

ABUNDANT SOFTWARE FUNCTIONS

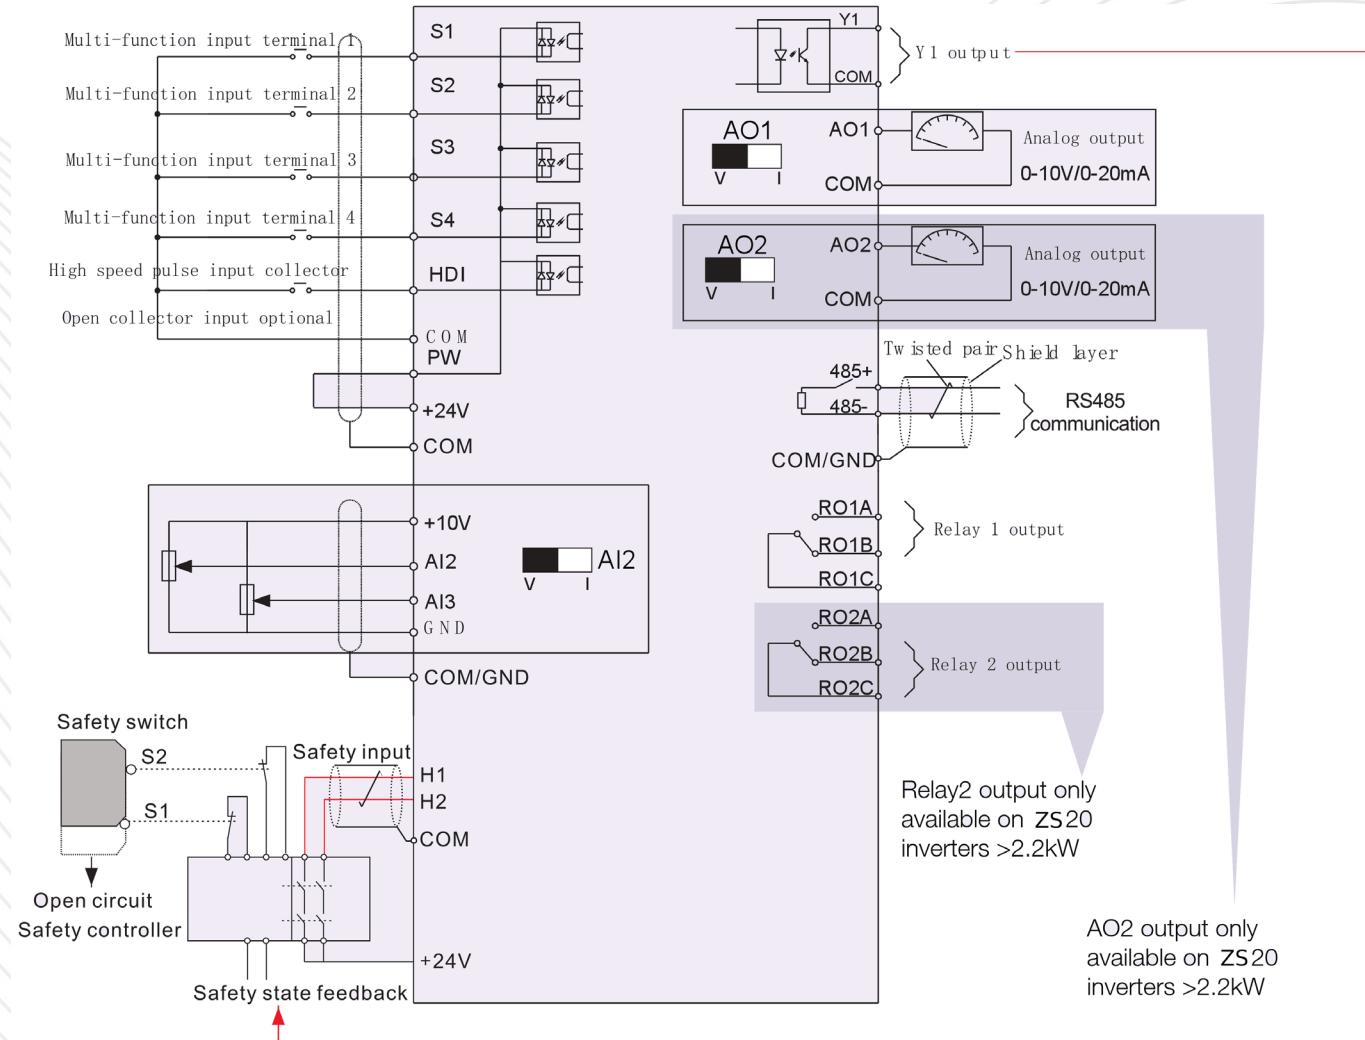

FUNCTION	USED TO	REMARKS
RS485 COMMUNICATION	Read and modify inverter parameters through connection to the upper computer so as to control inverter running status.	Configured with RS485 communication interface
PID	Carry out PID operation and feedback Signals to control inverter output frequency and improve target accuracy and stability. Applicable to pressure, flow and temperature process control.	Supports PID output polarity switching.
MOTOR PARAMETER AUTOTUNING	Carry out rotation or static autotuning, improving control accuracy and response speed.	Classified into rotation autotuning and static autotuning.
SIMPLE PLC FUNCTION	Change the running frequency and direction automatically according to the running time set by simple PLC to meet process requirements.	Supports multiple running modes.
MULTI-STEP SPEED CONTROL	Meet the speed control requirements in different periods of time.	A maximum of 16 steps can be divided for multi-step speed control.
MULTIPLE V/F CURVE SETTINGS	Meet the requirements of energy-saving operation for fans and water pumps and of various variable frequency power supplies; adapt to different load applications.	Linear, multi-dot, multi-power and V/F separation settings, implementing flexible setting of V/F curves.
VIRTUAL TERMINALS	Take external signals as local virtual I/O to reduce hardware configuration.	Corresponding virtual terminal functions must be enabled in communication mode.
DELAY OF SWITCHING ON AND OFF	Provide more programming and control modes	Max. switching on/off delay is 50s
UNINTERRUPTED RUNNING IN INSTANTANEOUS POWER OFF	Ensure uninterrupted running in instantaneous power off. Especially applicable to the Situations with high requirements on continuous operation.	At transient voltage drop, the inverter can keep running by feedback energy without stop in valid time.
VARIOUS PROTECTION FUNCTIONS	Provide overall fault protection functions.	Various measures provided to protect against faults such as overcurrent, overvoltage, undervoltage, overheating, and overload, whose information can be saved.
MULTIPLE BRAKING MODES AVAILABLE	Provide multiple braking modes, satisfying accurate and quick stop under different loads.	DC braking, flux braking, dynamic braking
BATTERY CAPACITY DISPLAY	Display the accumulative power consumption on the inverter without watt hour meter.	Inverter power consumption can be queried.
